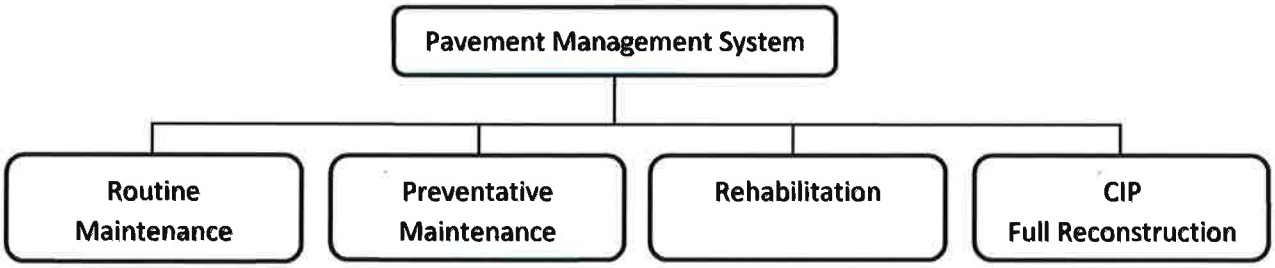
SUBJECT: June 23, 2014 Work Session
Paving Issues

A pavement management system that focuses on keeping good streets in good condition provides the most efficient use of available and limited resources. The City of Las Cruces' (City) Pavement Management System is the sum of all the actions we undertake to maintain and provide functional, safe, and reliable streets for the traveling public. We use specific preservation methods to protect the investment made in our transportation infrastructure by maximizing the life of our streets and getting the most for our dollar. Our pavement management system consists of the following categories:



Each of these categories is vital to the success of how the City manages its pavement.

The presentation will describe how the City Council establishes the framework for building and maintaining the City's infrastructure and the continuum of preservation methods applied to a street over its lifespan.

I am available, at your convenience, to discuss this issue. If you have any questions or require additional information, please do not hesitate to call me at 528-3125 or email me at lreyes@las-cruces.org.
