

@ddress Government

Now every physical address has a digital address.

We call it @ddress.

Send messages to specific streets, service areas and neighborhoods.
~ We call it *StreetBeat*

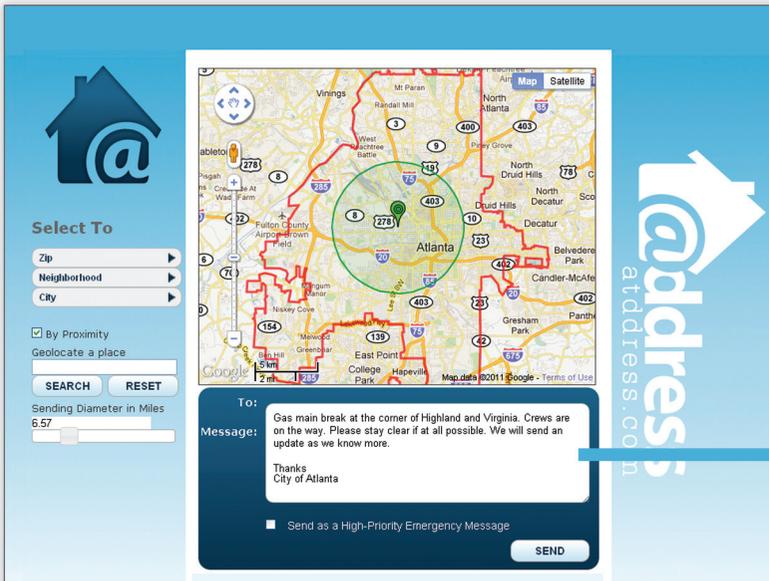

Target safety alerts to relevant geographical areas.

Notify citizens of road work, tree trimmings, and other public service.

Innovative Geospatial Communications

Government Dashboard

Private Resident

What is @address?

@address is a web portal linked to home addresses that organizes communications and events between people, business, government, and communities.

Through geographically pinned and verified accounts, @address allows households and citizens to connect with neighbors, government, and various groups.

One @address exists for each physical address. Each @address is owned by the resident(s) of that address.

@address informs, educates, and stimulates communities, cities, neighborhoods, counties, online groups, and relationships.

Government Guidance.

Through @address, cities, city leaders, counties and states will be able to deliver controlled and in many cases, emergency digital messages to specific street addresses, zip codes, neighborhoods, cities, regions, and other targeted geographic locations.

StreetBeat.

We call the messages that are sent by government, business and residents – *StreetBeat*. @address provides an intuitive, user friendly and fun messaging system. Send StreetBeats to counties, cities, zip codes, neighborhoods and by proximity.

Cloud Based

@address is a Cloud-based web portal linking all home addresses in the U.S. via geospatial software. There is no software or infrastructure needed to use the @address platform. Governments simply apply to have their jurisdiction activated and precise geo-communications are just a click away.

Get Your @address

@address is launching first quarter 2012 in select areas. Contact us today to see how @address can enhance your communication needs.
